

Press Release – Kortrijk (Belgium), 18 May 2026

Sustainable Solutions Kortrijk 2026 connects industries through integrated energy technologies

Following a successful 2025 edition, Sustainable Solutions Kortrijk will return to Kortrijk Xpo on 23 & 24 September 2026 for its fourth edition. The exhibition continues to strengthen its position as the leading platform for smart, interconnected energy technologies, building on the strong results and in-depth content of last year's event.

Building on a proven success formula

The 2025 edition marked a major milestone for the event. The transition from Solar Solutions to Sustainable Solutions reflected a deliberate shift towards a broader, future-oriented approach. This strategic repositioning resulted in strong visitor numbers and confirmed the growing demand for integrated solutions within the energy transition.

In 2026, the exhibition will continue along this path, with an even stronger focus on system integration. The energy market is evolving rapidly towards ecosystems in which solar energy, energy storage, electric mobility and sustainable climate solutions converge into one intelligent system. Sustainable Solutions Kortrijk responds to this evolution by presenting these technologies not as standalone products, but as interconnected solutions.

Always connected: from the exhibition floor to 365 days of impact

At the beginning of April, Sustainable Media 365.be was successfully launched as a new digital platform for Belgium's sustainable energy and technology sector. The platform provides industry professionals with year-round access to news, market insights and updates on the latest innovations. In this way, Sustainable Solutions Kortrijk extends beyond the two exhibition days into a 365-day online platform.

In addition, Sustainable Solutions works closely with Dutch New Energy Research, its in-house and highly regarded research agency. Through trend reports, dashboards and presentations during the event, visitors gain exclusive insights into both historical and future market data.

Strong content programme focused on current industry

Sustainable Solutions Kortrijk 2026 will once again offer an extensive and in-depth knowledge programme featuring thematic sessions, panel discussions and practical case studies addressing today's key industry challenges. Topics such as smart energy management, hybrid systems, grid flexibility, circular solutions and innovative business models will take centre stage, alongside collaboration between public and private stakeholders and the impact of regulations and market developments.

The event is supported by a strong network of industry organisations, including ODE (Organisation for Sustainable Energy) – represented by its technology platforms PV Vlaanderen, Warmtepomp Platform and Warmtenetwerk Vlaanderen – as well as EDORA, EV Belgium and

Flux50. Their involvement ensures a high-quality and relevant programme that addresses both the opportunities and the challenges within the market. The common thread throughout the event remains the alignment of technology, policy and end-user needs in an increasingly complex energy landscape.

Innovation and networking as driving forces

In addition to knowledge sharing, the exhibition continues to serve as an important driver of innovation and business development. Exhibitors will showcase their latest products and technologies, while professionals from across the sector come together to exchange ideas, build relationships and initiate new collaborations.

Over the years, the exhibition has clearly established itself as a platform where high-quality leads are generated and concrete projects and partnerships take shape.

Strengthened collaboration with CleanTech Xpo

One of the key developments for 2026 is the further integration of CleanTech Xpo. Following a successful initial collaboration, this knowledge event will now be physically connected to Sustainable Solutions Kortrijk through linked exhibition halls.

This setup creates a powerful multidisciplinary platform where energy, environmental technologies and circular solutions come together. Topics such as water, air and soil management, the circular economy and decarbonisation will be directly connected to energy technologies.

International growth and long-term vision

Sustainable Solutions Kortrijk is part of a broader European expansion of the exhibition concept. After years of success under the former *Solar Solutions* name, the events have evolved into *Sustainable Solutions* exhibitions, all sharing the same focus on integration and innovation within the energy transition.

With editions in Amsterdam, Düsseldorf, Leipzig and Vienna – and further international expansion planned – the network continues to grow, contributing to knowledge sharing and collaboration at a European level.

Exclusive access for industry professionals

Sustainable Solutions Kortrijk will take place on Wednesday 23 and Thursday 24 September 2026 at Kortrijk Xpo and is exclusively open to professionals active in the sustainable energy sector. Using invitation code **INVITE26**, visitors can attend the exhibition free of charge (or by scanning the QR code featured in the advertisements). Without an invitation code, admission costs €75 excluding VAT per person. The full programme, including exhibitors, speakers and ticket information, will be announced soon through the official channels
